

Sheet Bend Knot

The Sheet Bend is for joining ropes of different sizes. To tie: form a bight on the end of the larger rope and hold firmly in your hand, then pass the end of the smaller rope from below up through the bight, bring the end of the smaller rope around and under the bight of the larger rope, then slip it under its own standing part and continue over the bight of the standing rope. Tighten by pulling the standing part of both ropes.

Carrick Bend Knot

The Carrick Bend Knot is one of the strongest knots. It cannot jam and unties easily. To tie: with one rope-end form an underhand loop – with both the end and standing part pointing away from you, start the second rope beneath both sides of the loop, take the end of the second over the standing part of the first rope, then under the end of the first rope, then over the left side of the loop, then under itself – and let the second end lie over the right side of the loop. Finish by pulling on the standing parts of both ropes.

*“For nothing will be impossible with God.”
(Luke 1:37)*
